Agenda

- **Building the API**
 - Create Web API Controller
 - Reading via the API
 - Customizing the Controller
 - Inserting via the API
 - Using Associations and Routes
 - Using Query Parameters

Summary

■ Building the API

- Creating an API is simple with ASP.NET Web API
- Ninject needs to be modified to work with Web API
- You can use verb-names in controllers to specify operation type
- Supporting Camel-Cased results in JSON is supported too
- Associations are possible through Routing configuration
- Additional parameters may be supplied via a Query String
